Education

Vellore Institute of Technology

B.Tech in Computer Science and Engineering

2022 – 2026

CGPA: 7.8/10

Agrasain Boys School

Class XII (ICSE)

2022

Score: 87%

Skills

Languages: Java , Python,SQL

Backend & Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Ai, WebSockets, REST APIs

Testing & QA: Manual Testing, Test Case Design, Bug Reporting, Regression Testing, Sanity Testing, SDLC/STLC

API & Tools: Postman (API Testing), OpenAPI/Swagger, Git, Docker

Core Areas: OOP, Operating Systems, Data Structures & Algorithms, System Design

Experience

Software Engineer Intern | Lex – Your Legal Expert

Oct 2025 – Jan 2026

- Delivered REST APIs with Spring Boot to enable data flow between AI/ML components and the application layer of a legal-tech platform.
- Designed backend modules using Spring Data JPA and Spring MVC for efficient data retrieval across core legal query workflows.
- Integrated Spring AI components to enable context-aware query processing for legal document analysis.

Projects

Expense Tracker | Solo Developer

[code](#)

Spring Boot, Spring Ai, LLM, Kafka, Kong, JWT, Docker, AWS, MySQL

- Architected event-driven microservices ecosystem in Java/Spring Boot, leveraging Apache Kafka for async messaging and Kong API Gateway for centralized traffic management and routing.
- Engineered an LLM-powered financial SMS processing pipeline using Spring AI, incorporating automated PII detection and masking to ensure data privacy compliance at scale.
- Containerized a production-grade distributed system with Docker Compose, enforcing database-per-service isolation, JWT authentication, and idempotent Kafka consumers, with planned cloud deployment on AWS.

Collaborative Code Editor | Backend Developer (Team of 3)

[code](#)

Spring Boot, WebSockets/STOMP, OT, Redis, MySQL, Docker, Postman

- Built a live multi-user coding backend supporting 5–10 active editors with 150–200ms synchronization across shared files.
- Integrated OT-based conflict resolution using Redis + MySQL hybrid persistence to maintain consistent shared state during concurrent edits.
- Containerized backend, Redis and MySQL using Docker Compose; performed regression testing after each change to ensure existing sync behaviour remained stable.

QR-Driven Queue Automation | Solo Developer

[code](#)

Java, Spring Boot, WebSockets, Docker, MySQL, OpenAPI, Google Cloud

- Engineered QR-based onboarding where users could join active queues within 1–2 seconds after scanning.
- Delivered 7 OpenAPI-documented REST endpoints with MySQL /Cloud SQL support; validated each via Postman covering response codes, payloads, and error cases.
- Simulated 50–100 concurrent users to stress-test WebSocket update flow, maintaining <120ms state update latency across sessions.

Achievements & Extra Curriculars

- Solved 320+ DSA problems on LeetCode, including 160+ medium-level questions.
- Completed JPMorgan Chase and AWS virtual simulations focused on backend API development and deployment work.
- Developed a CLI-based image organizer in Python to automate sorting and renaming of 250+ event photos by metadata — reducing manual effort by ~60%

Certifications & Extra Curriculars

- Bits and Bytes of Computer Networking — Coursera
- Blockchain Fundamentals
- Hindi (Native), English (Full Professional Proficiency)
